ORTHOTOPIC HEART TRANSPLANTATION: A CASE REPORT

ZHOU Xin-ming, WANG De-hui, JIANG Fei, et al.

Department of Thoracic Surgery, Affiliated Hospital, Ningbo Medical College, Ningbo 315000, China

Abstract: A 17-year-old male patient was admitted to our hospital for severe cardiomyopathy. After 1 year of medical treatment, the patient's condition deteriorated, so he was treated with orthotopic heart transplantation. The patient was successfully subjected to a transplant surgery, followed by postoperative care, and was discharged. The patient's clinical course and postoperative status are summarized in this report.

Key words: heart transplantation; orthotopic heart transplantation; immunosuppressive agent

1 Introduction

1.1 Clinical course

1.1.1 Preoperative stage

1.1.2 Operative stage

1.1.3 Postoperative stage

1.1.4 Summary

2 Methods

2.1 Indications for heart transplantation

2.2 Indications for orthotopic heart transplantation

2.3 Surgical technique

3 Results

3.1 Operative outcome

3.2 Postoperative outcome

3.3 Complications

4 Discussion

4.1 Indications for orthotopic heart transplantation

4.2 Operative technique

4.3 Postoperative management

5 Conclusion

References
